

Saving Workbooks in PDF Format

Documents in the Excel program, as well as in Word, Access, Publisher, and PowerPoint, can now be saved in PDF format. PDF format is a non-revisable format that can be read by all platforms of computers. An Adobe Reader program will have to be installed on the computer in order for the document to be read. This is a free program that can be downloaded from the Adobe Web site.

Saving workbooks in this format is a good way to save documents that are going to be used in a Web page or within the Blackboard program. **Before a workbook is saved in PDF format, it should be saved as an Excel workbook.** If the workbook is not saved in Excel before it is saved as a PDF file, it will not be possible to make revisions to the workbook. The last step in creating a document that is to be in PDF format, is to save that document in a PDF format. To save a workbook in PDF format, complete the steps below.

- ❖ Create or open the workbook that is to be saved to PDF format.
- ❖ Make any revisions that need to be made to the workbook.
- ❖ Save the workbook as an Excel workbook.
- ❖ Click the **Microsoft Office Button**.
- ❖ Select **Save As** from the list of commands that appear.
- ❖ Click the option for **PDF or XPS**.
- ❖ The **Publish as PDF or XPS** dialog box will display (see illustration below).

- ❖ In the **File Name** box, input a name for the workbook or use the default name.
- ❖ The **Save as Type** box should display **PDF(*.pdf)**.
- ❖ In the **Save in** list, select the storage location for the PDF file.
- ❖ Check out the other options that are available in the dialog box.
- ❖ When all the options have been selected, click the **Publish** button.
- ❖ The document will be published as a PDF document.
- ❖ The document will open up in **Adobe Reader** if the **Open file after publishing** check box is selected.
