

## CUSTOM ANIMATION

Animations are used to add different effects to how an object appears in the slide. This animation is used to apply animation to selected objects in the presentation. Each animation has to be applied to each item individually.

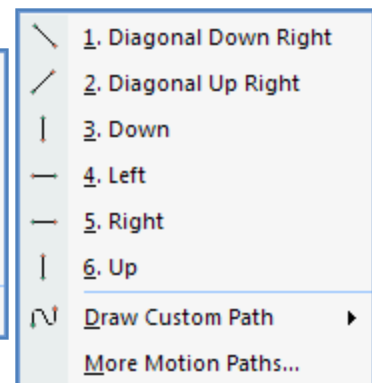

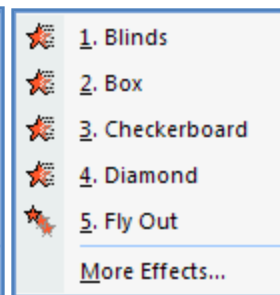

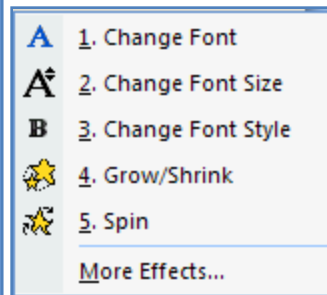

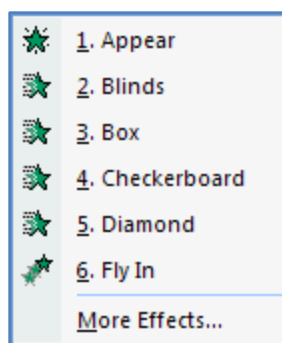

- + Click the **Clip Art** image that is to be animated.
- + Click the **Animations Tab**.
- + In the **Animations Group**, click the **Custom Animation** button.

- + The **Custom Animation Task Pane** will display on the right side of the window.
- + Click the **Add Effect** button.
- + Choose from one of the four options as shown in the illustration at the right.

- + **Entrance** - When this option is chosen, the animation to the object will appear when the slide is shown.
- + **Emphasis** - This option will be activated sometime while the slide is being displayed. How the image animation is activated will depend on how it was set up.
- + **Exit** - To specify how the animated image will act when exiting from the slide during the presentation, choose this option.
- + **Motion Paths** - This option is used to draw custom paths for the animation of the image in the presentation.
- + A gallery of different animations will appear.
- + A different list will appear for each of the four categories (see illustrations below).
- + Click on one of the animations to apply it to the image.
- + Click the **More Effects** or **More Motion Paths** link to display additional animations.
