

CONVERTING HANDWRITING TO TYPED TEXT

When working with the Notebook software, it is possible to use one of the pen objects to input text into the Notebook. Once the text has been input, it is possible to convert that text into typed format. To do this:

- ✦ Write the text with one of the pen objects.
- ✦ Press the **Select** button on the toolbar (see illustration at right).
- ✦ Press the word(s) that were just written.
- ✦ A selection rectangle will enclose the words (see illustration at right).
- ✦ Click the list arrow in the top right corner of the text box that appears.
- ✦ A list of four possible interpretations will appear at the top of the menu.
- ✦ Each of the alternatives is preceded by the word "Recognize."
- ✦ Select the option from the list that best matches the written text.
- ✦ The handwritten item will be converted to typed text (see illustration at right).
- ✦ The conversion software may not be able to convert all the letters properly, therefore, it may be necessary to make some changes to the words once they are converted.
- ✦ Creative Pens cannot be used to write words that are to be converted to typed text.
